classroom.

INTERACTIVE TEACHING TECHNOLOGIES FROM MIMIO®

You understand the value of interactive technology – how it empowers teachers and engages students. The question is, how do you bring this 21st century technology to every teacher and every student in your school system without breaking the budget? It all starts with your existing whiteboards.

Technology *on* the whiteboard, not *in* the whiteboard.

Conventional systems put technology into the whiteboard. We put ours onto the whiteboard. The mimio® Interactive system uses patented technology that fits neatly into a small, unobtrusive bar that easily attaches to your current whiteboards. The bar, along with the mimio® Stylus let the teacher control everything that's displayed. You can even capture color notes and drawings. And to bring the system to life, we've designed mimio® Studio, an intuitive software suite that lets teachers create engaging multimedia lessons for every grade and subject.

The combined result is an easy-to-use, lightweight, portable, and highly affordable system that brings new energy to your classrooms, as well as your budget. Perhaps Kurt K., a Technology Integration Specialist from McLean Virginia says it best; "Once we started setting them up in our classrooms, the kid's hands couldn't be kept down! They ALL wanted a turn! It was fantastic!"

So next time you look at your budget – look to mimio®.

"I love the fact that it could be used on any whiteboard and we didn't have to write up maintenance orders to get equipment installed."
